**When my doctor said my thinning, gray, dying hair was "normal" for a "woman my age" – I'd HAD it!**

**So I took these 5 steps to cure my own hair poisoning... and I finally saw the young, healthy, sexy hair I'd always wanted... and you can too!**

Dear Beautiful Reader,

When I realized that people were staring at me in the grocery store, I knew I had to do *something* about my gray, thinning, ugly hair.

I was only 40 years old, but my hair made me look at least 55. I felt like an old frump... even in my sexiest clothes.

"Without beautiful hair, you just feel ugly."

Tell me, do you have:

- ✓ Streaks of gray, dull hair...?
- ✓ Thinning hair that falls out in clumps...?
- ✓ Stubborn short hair that refuses to grow long...?
- ✓ Unmanageable hair – especially if you're African American...?

If you answered yes to any of these, then you may be suffering from hair poisoning.

As women, hair definitely dictates our self-confidence. "Without beautiful hair, you just feel ugly," one tormented woman once wrote to me.

Feeling ugly is vicious. Your confidence is completely zapped. You don't have the energy or zest for life. You don't want to go out in public because you feel like everyone's staring.

That's exactly what happened to me . . .

(Over, please...)

And when my doctor told me my thinning, gray, dying hair was "normal" for a "woman my age" – I'd had it!

I was going to get to the bottom of this and fix my hair... no matter what it took.

I spent thousands of dollars on hair products... everything from topical creams to pricey oral drugs with terrible side effects.

I spent years doing research. I traveled the world, interviewing hundreds of people from cultures famous for their beautiful hair.

I eventually found myself in South Brahmī, India. The women there hold a world record for the longest hair – despite 90% humidity and scorching hot temperatures.

It was there that I discovered the secret to growing healthy, perfect hair.

### **About This Special Report..**

During my research, I discovered many things that actually kill your hair. Some make your follicles clog up, which chokes the hair to death. Some damage the roots, causing "hair falling," or when hair falls out early. Still others cause premature graying, thinning, and more.

### **I coined this effect "*capillus veneficii*" – hair poisoning.**

If you've searched out all of the options... asked your doctor and your girlfriends... even considered wearing a wig or taking *drugs*...

... Then please, take action: Read this report, all the way through.

In many ways, it could "save" your life.

I know it saved mine.

To your beauty,

*Eva*
